ACTIS COMPUTER CELEBRATES 20 YEARS OF EMBEDDED DESIGN SOLUTIONS

(April 7, 2011)   Today, as part of its 20th jubilee, ACTIS Computer celebrates 20 years of innovation in embedded design solutions used for mission critical, telecoms, research and industrial applications.

Founded in April 1991, ACTIS Computer has a long experience as a board level manufacturer in the embedded boards market. With its engineering design center at its headquarter in Geneva/Switzerland and sales office in North America, ACTIS Computer offers innovative and high-quality products that meet customer requirements for its PowerPC based Single Board Computers.

The ACTIS Computer's product portfolio offers a large range of hardware based COTS and custom designs including VME and CompactPCI based SBC boards, COM Express processor modules, PMC modules, Standalone processor boards and IndustryPack mezzanine modules.

ACTIS Computer provides also and exhaustive offer for real-time software support including U-Boot boot-loader, GNU/Linux and VxWorks Board Support Packages.

ACTIS Computer objective for next years challenge is still offering long-term availability products and innovative solution like the latest introduction related to Data Recorder product series featuring very lower power consumption ready for mission critical applications.
